The North Magnetic Pole is the wandering point on the surface of Earth's Northern Hemisphere at which the planet's magnetic field points vertically downwards (in other words, if a magnetic compass needle is allowed to rotate about a horizontal axis, it will point straight down). There is only one location where this occurs, near (but distinct from) the Geographic North Pole and the Geomagnetic ...

Sat, 15 Sep 2018 19:55:00 GMT

There are two main versions of north: true north and magnetic north. There is also a third version, grid north, but this is not related to magnetic declination, so it is only briefly described at the bottom of this article. The difference between true north and magnetic north is called magnetic ...
